DERMATIZE ANTIBACTERIAL HANDWASH

Dermatize antibacterial hand wash is a one-step hand wash/antibacterial skin cleanser that meets requirements for use in processing areas of USDA inspected food processing plants. **Dermatize** contains 1.25% benzethonium chloride, an ingredient with global acceptance in personal care products. Benzethonium chloride is highly effective with short contact time against a large number of gram-positive and gram-negative bacterial organisms.

The Centers for Disease Control states, "Hand washing is the single most important means of preventing the spread of infection." To decrease the potential of microbial-transmission, plant personnel must clean their hands frequently. **Dermatize** is USDA authorized E-2 (hand washing and sanitizing compound).

Use of **Dermatize** will help comply with HACCP guidelines. **Anderson Chemical Company** certifies that this product is acceptable for use as a hand washing and sanitizing compound (USDA E2).

*Available in 4/1 gallon cases.
Item No. ADP0004.*
