

ANTROL RO CHEMICAL CONTROL UNIT

Husky 205 Pumps

The “Antrol RO Chemical Control Unit” is a wall mounted panel for the purpose of dispensing, cleaning and sanitizing products into Reverse Osmosis Systems.

It provides flexibility in dispensing based on conductivity, timed or push button feed methods.

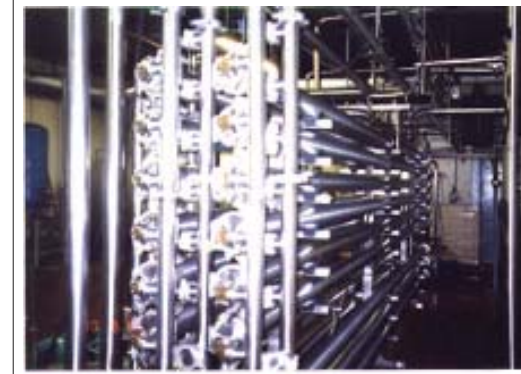

It has the ability to operate 8 air-operated pumps with accuracy and repeatability. Anderson will assist you with your specific design and implementation needs.

Membrane Plant Chemical Dispensing & Control Equipment Example (Cleaning & Sanitizing)

PLC Control, LCD Interface, Double-Stroke Air Pumps

Each Dispensing System Is Individually Designed
